

ABSTRACT OF THE DISCLOSURE

A method and system for inputting time in a video environment using sliders are disclosed. In one embodiment, a method for inputting time in a video environment, comprises displaying an analog-type mechanism having an hour hand grab mechanism and a minute hand grab mechanism. The hour hand grab mechanism may be pulled with a user input device to set a desired hour. The minute hand grab mechanism may be pulled with the user input device to set a desired minute. A day/evening selector is displayed, wherein day or evening may be selected with the user input device.
